

KönigOutdoor

The story of KonigOutdoor

The KönigOutdoor brand was conceived to provide a sophisticated high-end solution for aspirational outdoor living.

Combining luxurious sintered stone surfaces with a durable weatherproof structure, a KönigOutdoor kitchen provides the functionality and aesthetic of an indoor kitchen; with the ability to withstand the elements outdoors.

Each bespoke KönigOutdoor kitchen is made in Britain, allowing you to design your dream outdoor kitchen without compromise. You can be sure of the supply chain and nod to the environment with minimal transport costs.

Useable and hygienic surfaces

Sintered stone is non-porous meaning that mould, bacteria or stains cannot penetrate the surface, making it very easy to clean, resulting in a hygienic usable surface for food preparation.

Weatherproof structure

Carcasses are made using a high-quality weatherproof composite board guaranteed for all seasons.

Bespoke appliance housing

We create beautiful bespoke housing for outdoor appliances, like perfectly moulding the worktop around a Kamado, for example.

Convenient mains services

Our outdoor kitchens can be designed to accept gas, water and electrical services for a fully functional kitchen, outdoors.

Bespoke stone work

We will ensure that the worktops will have the minimum number of joints, if any, and can make the pattern flow across the worktops, doors and panels where possible if a veined décor is chosen.

High grade stainless steel

The appliances that we stock, including grills, sinks and taps are made with high-grade stainless steel, making them incredibly durable, ensuring good looks for many years.

Durable exterior surfaces

Sintered stone has been used for exterior cladding for over 25 years, resisting ultraviolet light and extreme temperatures without degradation. It is also highly scratch-resistant and will not warp or rot.

Internal unit options

Internally we can create shelving, drawers or an easy-access slide-out ledge for gas bottles and waste bins in door fronted units.

Carbon Neutral cladding

We can specify sintered stone produced in a carbon neutral environment, one of the most environmentally-friendly cladding materials used in architecture.

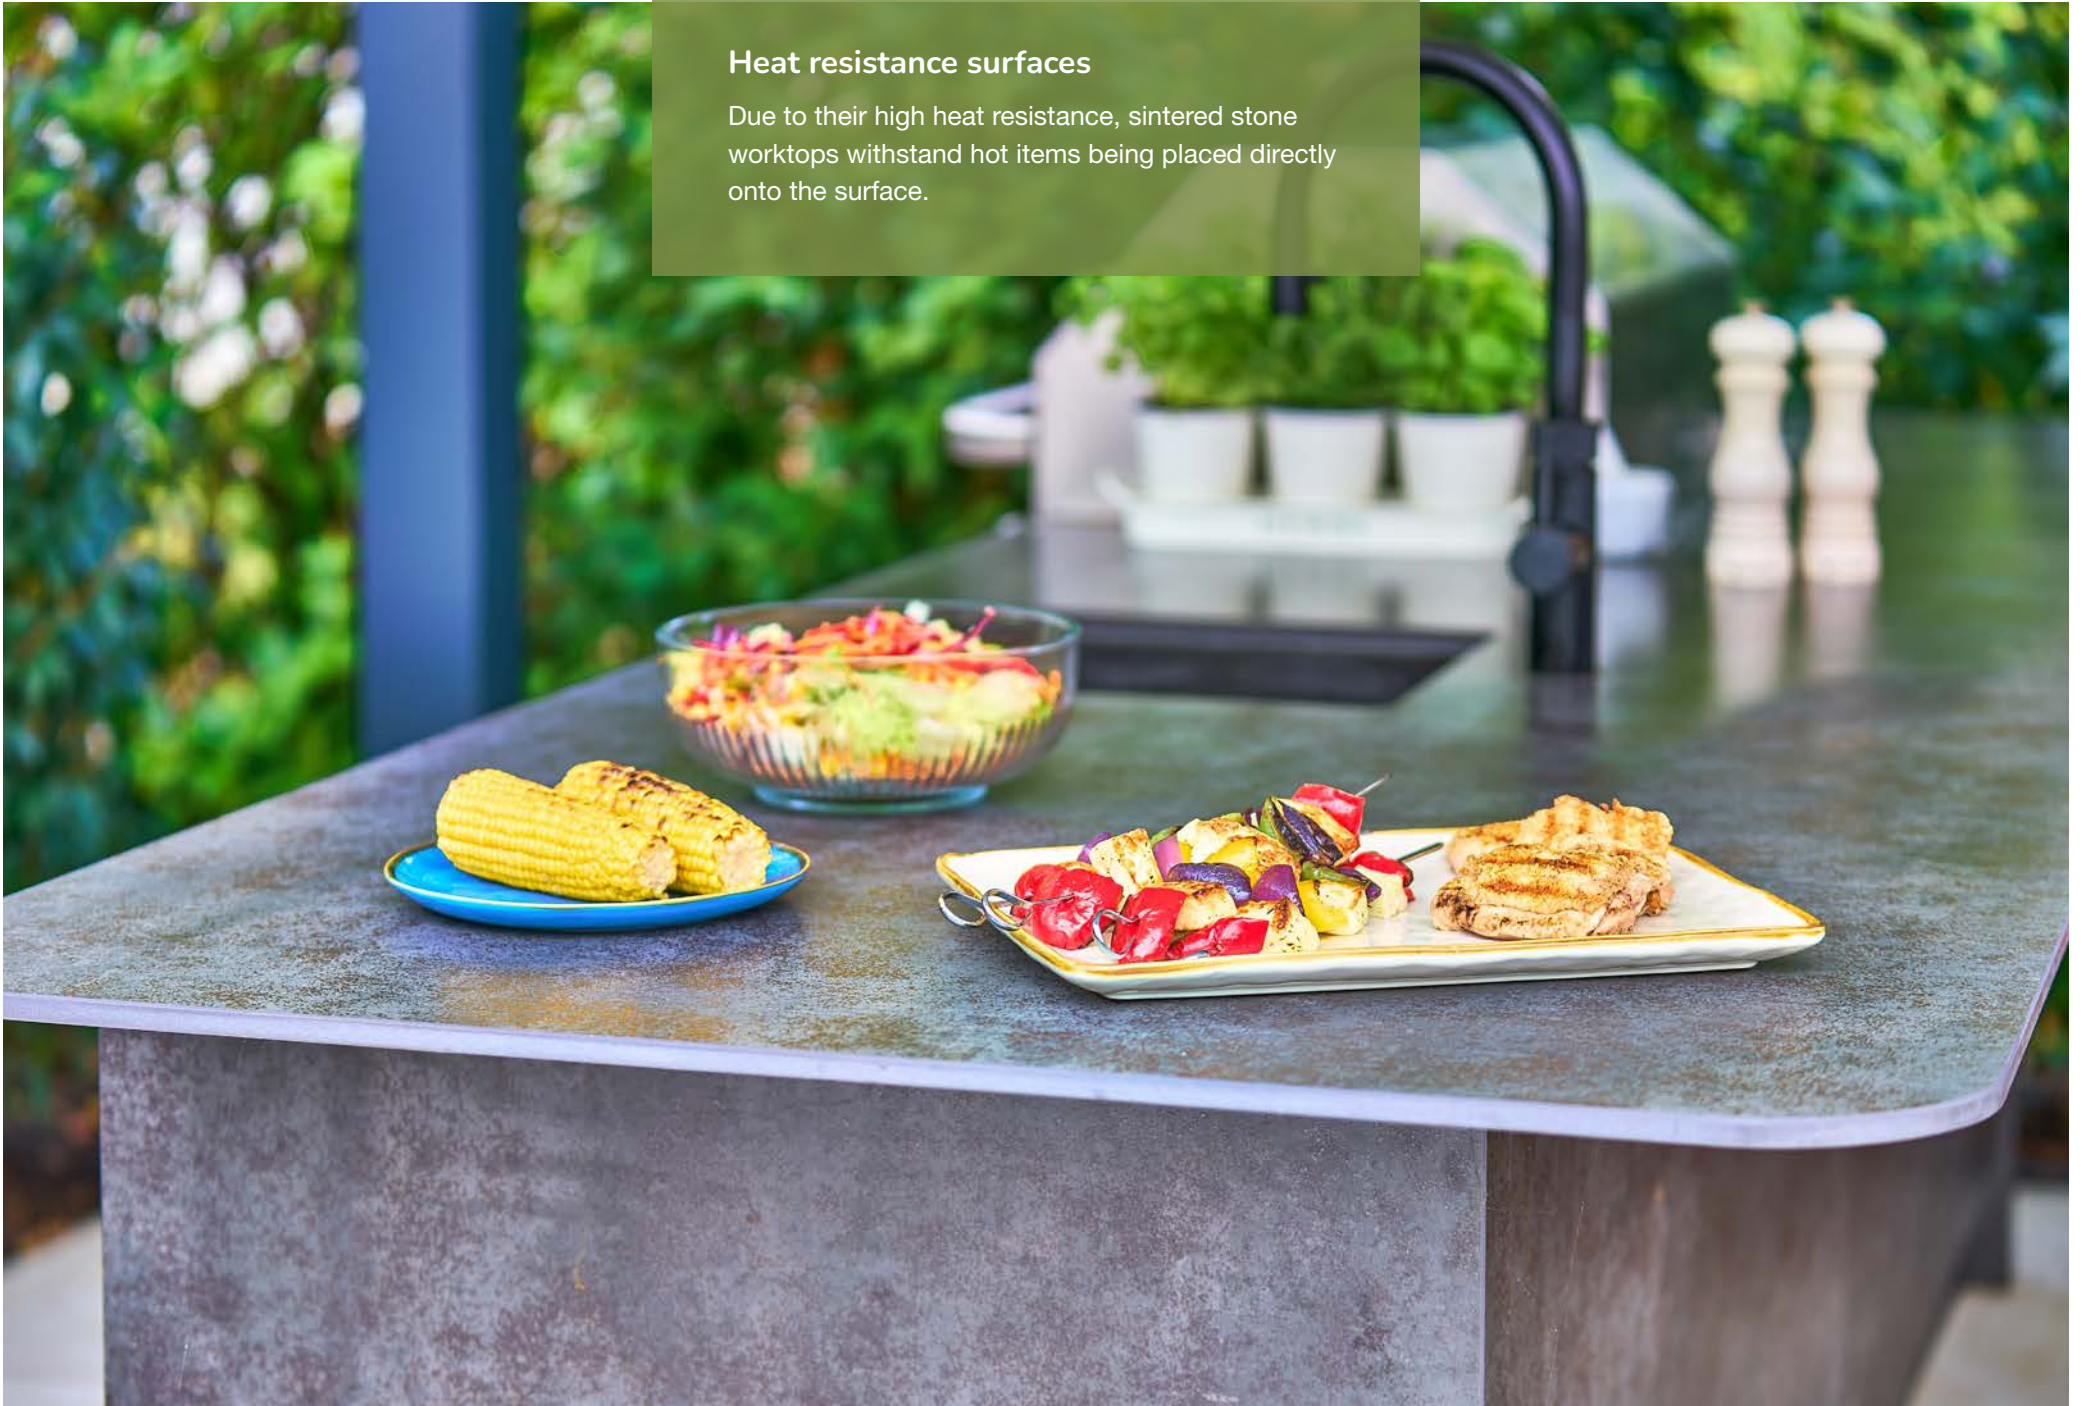

Year round al fresco cooking

A KönigOutdoor kitchen can be used all year round, particularly thanks to pergolas and outdoor heating opening up our gardens for more time in the year.

Heat resistance surfaces

Due to their high heat resistance, sintered stone worktops withstand hot items being placed directly onto the surface.

Showroom visits by appointment only through
